to accompany Fundamental Methods of Mathematical Economics

Mathematical economics is the application of mathematical methods to represent theories and analyze problems in economics. By convention, these applied methods are beyond simple geometry, such as differential and integral calculus, difference and differential equations, matrix algebra, mathematical programming, and other computational methods. ...

In mathematics, the elasticity or point elasticity of a positive differentiable function f of a positive variable (positive input, positive output) at point a is defined as $\frac{f'(a)}{f(a)} = \frac{1}{f(a)} \frac{df}{da}$ or equivalently $= \frac{df}{f} \div \frac{da}{a}$. It is thus the ratio of the relative (percentage) change in the function's output (f) with respect to the relative change in its input ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

MS is the salt solubility, and S_{FB} is free base solubility.. For a salt of a weakly basic drug, disproportionation may be induced by an excipient that raises the microenvironmental pH of the sorbed water layer above the pH_{max} value.

Le Soleil, au sein de notre galaxie, est une étoile de type naine jaune parmi tant d'autres : la Voie lactée contient entre 200 et 400 milliards d'étoiles, dont 20 à 40 milliards seraient des naines jaunes [16].Comme toute étoile selon les lois de la physique actuelle, sa masse permet à la densité en son cœur d'être suffisamment élevée pour provoquer des réactions de fusion ...
