The placenta begins to develop upon implantation of the blastocyst into the maternal endometrium. The outer layer of the blastocyst becomes the trophoblast, which forms the outer layer of the placenta. This outer layer is divided into two further layers: the underlying cytotrophoblast layer and the overlying syncytiotrophoblast layer. The syncytiotrophoblast is a multinucleated continuous cell ...

Autoimmune progesterone dermatitis (APD) is primarily characterized by a recurrent skin rash that varies in severity depending on the phase of the menstrual cycle. The rash generally appears during the second half of the cycle when levels of the hormone, progesterone, begin to rise. Following menstruation, when the levels of progesterone naturally fall, the rash typically improves and may even ...
