A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi.. Network computer devices that originate, route and terminate the data are called ...

Telecommunications in India began with the introduction of the telegraph. The Indian postal and telecom sectors are one of the worlds oldest. In 1850, the first experimental electric telegraph line was started between Calcutta and Diamond Harbour. In 1851, it was opened for the use of the British East India Company. The Posts and Telegraphs department occupied a small corner of the Public Works ...

MOFs are highly porous materials constructed by inorganic metal nodes and organic ligands, and have been extensively explored in different battery systems in the past decades (). Their adjustable porous structures and controllable compositions at molecular level are advantageous for the search of advanced electrode materials for batteries (e.g., LIBs, LSBs, LOBs, and SIBs).
