Highlights Comparison of different methods for predicting groundwater recharge. Estimates from water table fluctuations, and Cl, CFC-12 and 3 H chemistry are lower than those from a soil water budget. All methods yield highest recharge rates in areas of highest rainfall. Complex climate and fractured aquifers inhibit regional extrapolations of point estimates of recharge.

Pedology (from Greek: ?????, pedon, "soil"; and ?????, logos, "study") is the study of soils in their natural environment. It is one of two main branches of soil science, the other being edaphology. Pedology deals with pedogenesis, soil morphology, and soil classification, while edaphology studies the way soils influence plants, fungi, and other living things.

Hey man, Looks nice! Have been thinking about getting my Ubuntu on for a while, so will have a play and see. Other programs you may like for your list are Mendeley a dynamite referencing program which kicks Endnote's bum. As soon as I download a pdf through my browser, Mendeley picks it up, copies it to its own referencing subfolders, and searches for the doi.
