Iris recognition is an automated method of biometric identification that uses mathematical pattern-recognition techniques on video images of one or both of the irises of an individual's eyes, whose complex patterns are unique, stable, and can be seen from some distance.. Retinal scanning is a different, ocular-based biometric technology that uses the unique patterns on a person's retina blood ...

Vein matching, also called vascular technology, is a technique of biometric identification through the analysis of the patterns of blood vessels visible from the surface of the skin. Though used by the Federal Bureau of Investigation and the Central Intelligence Agency, this method of identification is still in development and has not yet been universally adopted by crime labs as it is not ...

Infection of cells by microorganisms activates the inflammatory response. The initial sensing of infection is mediated by innate pattern recognition receptors (PRRs), which include Toll-like receptors, RIG-I-like receptors, NOD-like receptors, and C-type lectin receptors.

The domain in which I did my research in cognitive science is the Bongard Problems.These are problems on visual pattern recognition that appeared first in the appendix of a book published by the Russian scientist M. M. Bongard in 1967, in what was then the USSR. They became more widely known to the western world when D. R. Hofstadter mentioned them in his book, "Goedel, Escher, Bach: an ...

Neural Networks – algorithms and applications Neural Network Basics The simple neuron model The simple neuron model is made from studies of the human brain neurons.

Neural Networks – algorithms and applications

In pattern recognition, data analysis is concerned with predictive modeling: given some training data, we want to predict the behavior of the unseen test data.
