This page is a resource for Doctor Wheeler's students in composition and literature. The page contains a list of logical fallacies from the Western European tradition of philosophy, and the intended audience is writing students taking freshman composition classes. The page is still under construction and I will be adding to this website over the term.

In logic, a tautology (from the Greek word ??????????) is a formula or assertion that is true in every possible interpretation. A simple example is "(x equals y) or (x does not equal y)" (or as a less abstract example, "The ball is green or the ball is not green"). Philosopher Ludwig Wittgenstein first applied the term to redundancies of propositional logic in 1921.

Logic (from the Ancient Greek: ??????, translit. logik?) is the systematic study of the form of valid inference, and the most general laws of truth. A valid inference is one where there is a specific relation of logical support between the assumptions of the inference and its conclusion. In ordinary discourse, inferences may be signified by words such as therefore, hence, ergo, and so on.
