Couple of times, Interviewer also ask about, how do you find, if a particular thread is Event Dispatcher thread or not? Well, if you are familiar with Swing API, they you may know that SwingUtilities provides isEventDispatchThread() method, which can be used to find out if current thread is Event Dispatcher thread or not. Another follow-up question is Why Swing is not thread-safe in Java?

Java is a general-purpose computer-programming language that is concurrent, class-based, object-oriented, and specifically designed to have as few implementation dependencies as possible. It is intended to let application developers "write once, run anywhere" (WORA), meaning that compiled Java code can run on all platforms that support Java without the need for recompilation.
