The stool culture is a test that detects and identifies bacteria that cause infections of the lower digestive tract. The test distinguishes between the types of bacteria that cause disease and the types that are normally found in the digestive tract (normal flora). The test helps to determine if pathogenic bacteria are the cause of a person's gastrointestinal symptoms (gastroenteritis).

Physical child abuse (ie, nonaccidental injury that a child sustains at the hands of his or her caregiver) can result in skeletal injury, burns, bruising (see the first image below), and central nervous system injury from head trauma (see the second image below).

Physical Child Abuse: Practice Essentials, Background

Classification (DSM-5 and ICSD-3) The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) makes no distinction between primary and comorbid insomnia. This previous distinction had been of questionable relevance in clinical practice and a diagnosis of insomnia is made if an individual meets the diagnostic criteria, despite any coexisting conditions.

Insomnia: Practice Essentials, Background, Anatomy

Attention deficit hyperactivity disorder (ADHD) is a mental disorder of the neurodevelopmental type. It is characterized by difficulty paying attention, excessive activity, and behavior without regards to consequences which is not appropriate for a person's age. There is also often problems with regulation of emotions. The symptoms appear before a person is twelve years old, are present for ...
